## Summary

Experienced and knowledgeable. I aim to help and encourage. I realise that I need others to fill gaps in my skillset!

I am happy to take responsibility and lead teams. I like to help encourage others to express themselves and contribute to team efforts.

While being imaginative, creative and practical helps in my ability to solve problems, I do arrive at solutions at a slower pace than I used to!

My knowledge of projects, teams, systems and organisations provides me with a realistic view of how to get things done. Something which provides frustration for creative people but something which has to be navigated.
